

VERTICAL GARDEN SOLUTIONS

GO UP THE WALL WITH HANGING GARDENS

We specialise in the design and installation of green walls and green facades for commercial and residential properties and public spaces. Vertical gardens are used as focal points, screens and living skins in buildings, homes and public spaces to beautify and green up urban areas.

WHICH SYSTEM?

Hanging Gardens provides a range of standard systems and customised solutions for a wide variety of interior and exterior applications .

LIVING WALL SYSTEM

The Living Wall System is a light weight, soil based method, with plants in removable felt pockets and the gardens suspended on stainless steel rods and rigging. The system includes automatic drip irrigation. This is ideal for creating low maintenance and sustainable vertical gardens over existing or new surfaces for interior or exterior application.

FREESTANDING FRAMED GARDENS

Freestanding Framed Gardens are self contained, powder-coated aluminium, modules with a waterproofed backing panel, a drip tray and automatic irrigation. They are ideal for exterior use as balcony gardens and for interiors they are perfect as single or double sided space dividers or wall units.

GREEN FACADES & FOLIAGE SCREENS

Green Facades and Foliage Screens are created using a tensile rigging system with planters and climbing plants. These are ideal for interior use as semi-transparent space dividers and for exterior use as green facades for buildings.

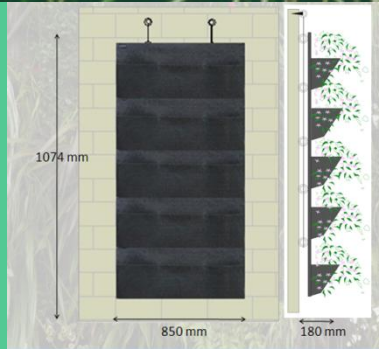

POCKET GARDENS

Our unique **Pockets Gardens** are light weight, soil based garden pockets with eyelets for easy attachment to existing exterior surfaces. Pocket Gardens are ideal for exterior application onto fences, wooden cladding, structures and retaining walls

To help you decide which product is best for your project the following decisions will lead you to the right solution.
