

VERTICAL GARDEN SOLUTIONS TIMBER FRAMED GARDENS

GO UP THE WALL WITH HANGING GARDENS

We specialise in the design and installation of green walls and green facades for commercial and residential properties and public spaces. Vertical gardens are used as focal points, screens and living skins in buildings, homes and public spaces to beautify and green up urban areas.

FREESTANDING FRAMED GARDENS

This system is a light weight method of installing vertical gardens where no penetration of substrates is permitted and where freestanding vertical gardens and space dividers are required.

TIMBER FRAMED GARDENS

Timber Framed Gardens use light weight, soil based pocket gardens in a self contained, timber framed module. They are ideal for exterior application as balcony gardens and space dividers. For interior application they are perfect as space dividers and wall units.

COMPONENTS

The modules come with 15 pockets for plants, a waterproofed backing panel, side panels and a drip tray.

The drip tray can be free draining for exterior application or sealed for interior gardens. Automatic irrigation can be added if required.

STANDARD SIZES

The standard modules are 1800 mm high 900 mm wide. The drip tray for exterior use is 350 mm deep and 200 mm high. Other sizes can be made as required.

STANDARD COLOURS

The modules can be stained or painted to any colour. Our standard colours are White - Silver Beach and Charcoal

FREESTANDING FRAMED GARDENS

PLANTS

The plants are delivered to site pre-planted into our unique botanical felt pockets. These removable felt pockets increase moisture retention and aeration of the roots and aid plant health. Ongoing maintenance allows for pockets to simply and quickly be swapped about.

IRRIGATION

Automatic irrigation is connected to a water mains supply or rainwater collection tanks. Watering is generally water conserving and drip fed. This approach delivers low operating costs and water management benefits.

ACCESSORIES

Accessories for Timber Framed Gardens are:-

- Self contained, submersible pumps
- Supplementary lighting for low light interior situations
- Castors for moveable gardens
- Rainwater collection and storage

BENEFITS

The benefits of this system are:-

- Quick and easy installation
- Balcony gardens that comply with Body Corporate requirements
- Low maintenance costs
- Improved air quality, productivity and health
